PRIORITY APPLN. INFO: DD 1988-320611 19881011  
INT. PATENT CLASSIF.: A61K037-02; C12P001-02; C12P021-04  
BASIC ABSTRACT:

DD 295871 A UPAB: 19931006

In the production of cyclosporins (I) by submerged culture of a (I)-producing microorganism, a 'detergent' (sic) is added to the culture. The specified 'detergents' are polar organic solvents (II), namely DMF, DMSO, propylene glycol, N,N-dimethylacetamide and N-methyl-2-pyrrolidone (NMP).

USE/ADVANTAGE - Cyclosporin A (Ia) is an immunosuppressant useful in transplantation surgery and for treating autoimmune diseases. Addition of (II) increases yields, e.g. by a factor of 1.4-4.7. (0/0) 0/0
